PacketView Pro™ with GPS Synchronization LAN/WAN Protocol Analyzer

Cortland, NY, 24 September 2001, - Klos Technologies, Inc., is pleased to introduce the first network protocol analyzer with optional GPS-synchronized time stamps. In use now for nearly two years at Lucent Technologies, Network Wireless Systems, PacketView Pro is now available to the general networking industry. Packets may be collected simultaneously at multiple locations with accurate time stamps provided by GPS synchronized clocks, then merged. Lost packets and accurate packet latency can then be determined.

PacketView Pro also supports simultaneous packet collection from multiple LAN and/or WAN interfaces at a single location. This allows PacketView Pro to collect packets at multiple router or bridge interfaces for analysis of local packet latency, translation, and routing.

All network packets are captured, filtered, saved in memory, and then decoded, and displayed in real time. PacketView Pro's line mode display presents the packets in a concise time-ordered form, while its detail mode displays and interprets the field-level contents of the packets. Like all of Klos Technologies protocol analyzers, PacketView Pro allows users to independently develop their own protocol decoders (using Microsoft C compiler) that are then

Klos Technologies, Inc. *Networking Technologies that Work*

automatically loaded when PacketView Pro starts. Custom protocol decoders developed for earlier Klos Technologies products are fully compatible with PacketView Pro and work without change.

PacketView Pro, with an introductory price of \$549, joins Klos Technologies' established line of LAN and WAN Protocol Analyzers. Combining all of the functionality of PacketView™ and the award winning SerialView™, along with the optional GPS time stamps and packet collection from multiple simultaneous interfaces makes it the most versatile low cost LAN/WAN protocol analyzer available.

PacketView Pro supports the TrueTime Model GPS-PC and the lower cost Klos Technologies portable TimeStamper™.

Since 1989, Klos Technologies, Inc., has been dedicated to producing quality networking products and providing low-cost networking tools to network developers and managers. For more information on PacketView Pro and other Klos Technologies' products, contact Kate Klos at marketing@klos.com, or at (607) 543-0333.

###

New! Simultaneous Capture on Multiple Interfaces

New! GPS Time Stamps and Location

Improved! Expanded 32 bit Packet File Format

Improved! Easier to use Packet Filters

Improved! Memory Management

Introductory Price \$549.
